

The 5G Infrastructure Public-Private Partnership

Christoph Thuemmler

Panel on business models and regulatory aspects

Business models

- Individual health budgets
- Personalised Medicine
- Precision Medicine
- QoS benchmarking
 - Comparing cost, quality and outcomes of therapies, for example surgical interventions, through Big Data Analytics
- Tagging and tracking

Regulatory aspects

- The most important step legislators can make towards 5G implementation is ensuring that new services which are related to 5G, (Health 4.0) can be billed and are reimbursable to the health care providers.
- Germany is a good example as they have already made some steps towards an effective governance system by introducing an e-health legislation package which is currently under scrutiny by the parliament.
