

The 5G Infrastructure Public-Private Partnership

WG Pre-Standardization

2015-10-20

5G-PPP Key ambitions

- 5G-PPP Program aims at delivering technologies, architectures and solutions to future 5G communication infrastructures
- Support of 5G-PPP targeted outcomes in global standards is a priority.
- Program Ambitions: Key Challenges / High-level KPIs
 - Providing 1000 times higher wireless area capacity and more varied service capabilities compared to 2010
 - Saving up to 90% of energy per service provided. The main focus will be in mobile communication networks where the dominating energy consumption comes from the radio access network
 - Reducing the average service creation time cycle from 90 hours to 90 minutes
 - Creating a secure, reliable and dependable Internet with a “zero perceived” downtime for services provision
 - Facilitating very dense deployments of wireless communication links to connect over 7 trillion wireless devices serving over 7 billion people
 - Enabling advanced user-controlled privacy

5G-PPP believes this is largely aligned with other 5G Industry Forums

5G-PPP Vision and Requirements

5G new service capabilities

USER EXPERIENCE CONTINUITY

INTERNET OF THINGS

MISSION CRITICAL SERVICES

- 5G supports efficiently three different types of traffic profiles
 - high throughput for e.g. video services
 - low energy for e.g. long-living sensors
 - low latency for e.g. mission critical services
- 5G covers network needs and contributes to digitalization of vertical markets
 - automotive, transportation, manufacturing, banking, finance, insurance, food and agriculture
 - education, media
 - city management, energy, utilities, real estate, retail
 - healthcare, government
- 5G scales to growing demand and different network layouts
 - anticipated dramatic growth in number of terminal devices and continuous growth of traffic
 - heterogeneous network layouts including satellite
 - power consumption less or equal to current networks and reduced network management complexity

5G-PPP believes there is a common view on 5G service capabilities

2015-10-20

5G-PPP Vision and Requirements

Key Requirements

These Key Requirements are not expected to be met all at the same time

- 1,000 X in mobile data volume per geographical area reaching a target $\geq 10 \text{ Tb/s/km}^2$
- 1,000 X in number of connected devices reaching a density $\geq 1\text{M terminals/km}^2$
- 100 X in user data rate reaching a peak terminal data rate $\geq 10\text{Gb/s}$
- Guaranteed user data rate $>50\text{Mb/s}$
- 1/10 X in energy consumption compared to 2010
- 1/5 X in end-to-end latency reaching 5 ms for e.g. tactile Internet and radio link latency reaching a target $\leq 1 \text{ ms}$ for e.g. Vehicle to Vehicle communication
- 1/5 X in network management OPEX
- 1/1,000 X in service deployment time reaching a complete deployment in ≤ 90 minutes
- Mobility support at speed up to 500km/h for ground transportation
- Accuracy of outdoor terminal location $\leq 1\text{m}$

5G requirements identified by other Industry Forums appear to be similar

5G-PPP and the Vertical sectors

Setting the requirements

- Requirements from vertical sectors for 5G are very important
- 5G-PPP is writing a series of whitepapers on automotive, health, media, energy, and manufacturing requirements involving players from these verticals.
- Challenges that will be difficult, even impossible, to meet with current LTE include:
 - Very low latency of 5ms is required (e.g. for autonomous driving)
 - Coverage needs to be improved (e.g. deep indoor, rural areas and roads)
 - Service continuity between different access technologies is needed (e.g. for automotive, manufacturing and media & entertainment)
 - High throughput of at least 50 Mbps is needed for immersive user experience everywhere (e.g. virtual reality and 4K videos)
 - High reliability / QoS control (and potentially low latency) of 99.999% is required for low throughput applications (~Mbps) for health, energy and manufacturing
 - Localization accuracy of 10cm is required for bicycles road safety applications
 - Low cost and energy efficiency is a must for energy and manufacturing applications
 - Lots of verticals require a high level of security

5G-PPP believes addressing the vertical sectors distinguish 5G from 4G

5G-PPP approach to research and standardization

- Develop a common view on use-cases and verticals
- Develop concepts addressing the scenarios
- Research projects investigate technology component candidates
 - First evaluations based on scenarios and use-cases
- Industry partners select relevant topics to drive in standardization
- Method to contribute
 - Partners inputs to 3GPP (and other standardization bodies)
 - Understanding the verticals (interaction with relevant standardization organs to understand key requirements)
- Next steps in research projects

5G-PPP View on Relevant Standardization bodies for 5G

- Telecom
 - 3GPP
 - Access, fronthaul, system architecture,...
 - ITU-R (SG3/SG5, WP5D), ITU-T (SG13/SG15)
 - IEEE
 - Access, fronthaul
 - ETSI (NFV/MEC), IETF/IRTF (SDNRG/NFVRG/SFC ...), IEEE (802.1CF), ONF, BBF, Open source projects (Open Daylight, OPNFV, Open Stack)
 - System architecture, softwarization and virtualization, control and orchestration
 - OneM2M
 - IoT, Machine-Type Communication
 - ETSI TC SES
 - Satellite subsystems

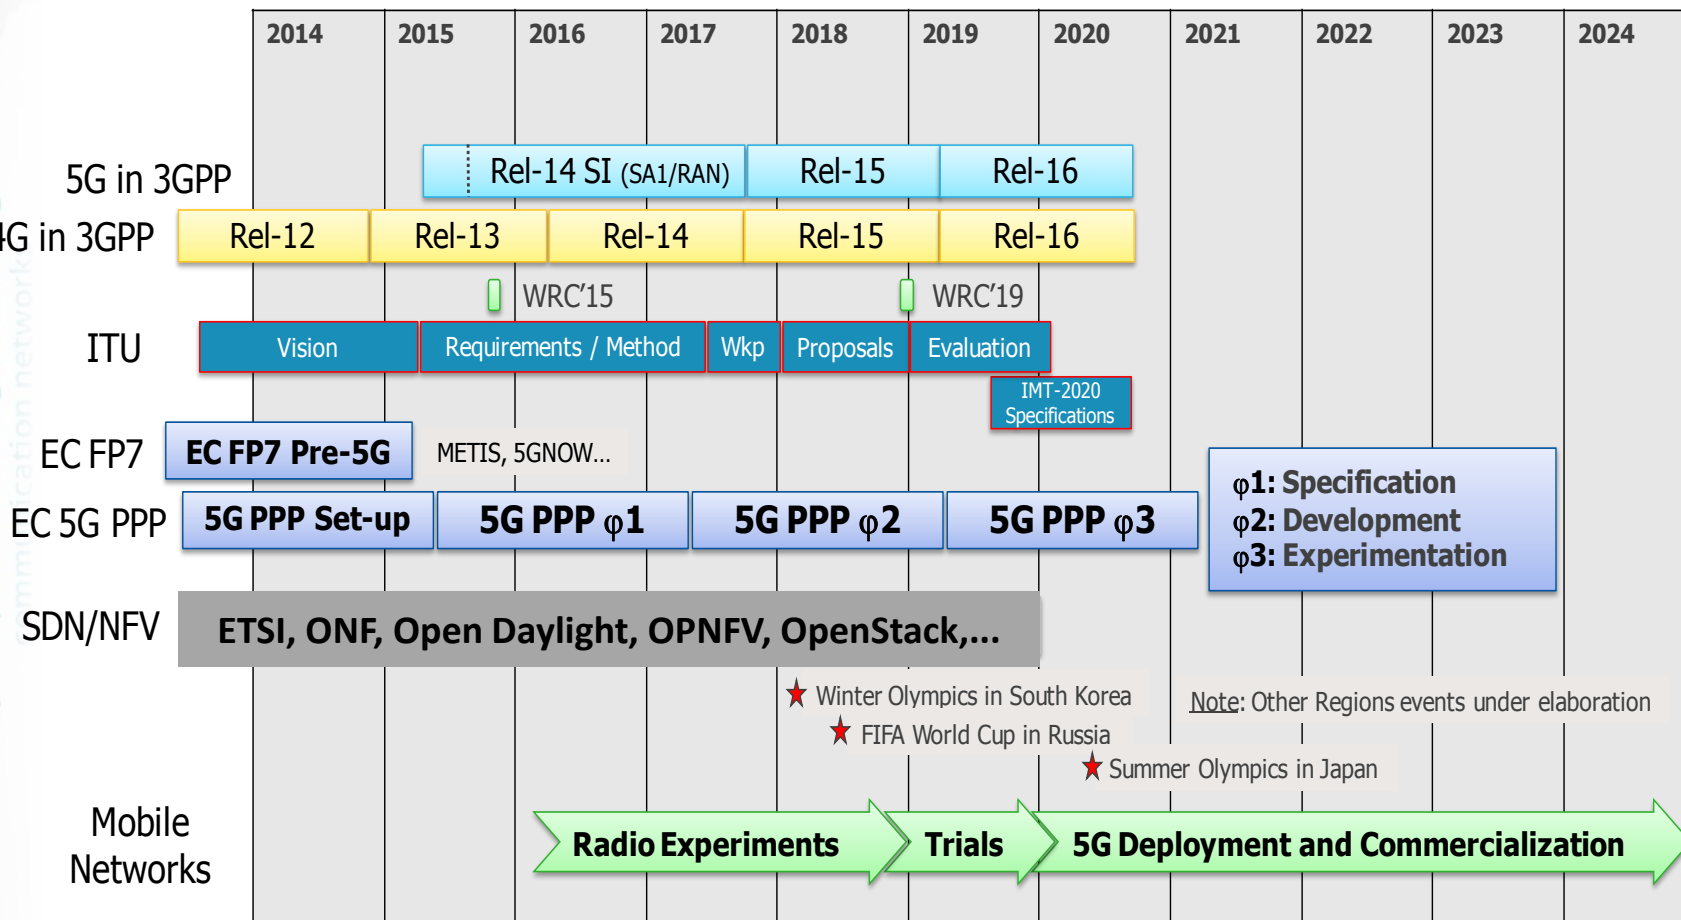

5G-PPP View on Relevant Standardization bodies for 5G

- Vertical-specific
 - Reason for verticals to use these solutions is to benefit from
 - Ease of integration
 - economy-of-scale
 - Trade-off between specific requirements and unified, standardized solutions
 - Focus on requirements from vertical SDOs
- Examples of SDOs for the Automotive industry
 - C-ITS, ETSI, CEN and ISO.
 - E.g., joint work between ISO TC204 WG18 and CEN TC278 WG16

5G Time-Line

Mapping to 3GPP projected schedule

5G Infrastructure PPP
The European path towards global next generation communication networks

3GPP Time-line

- Study Phase in 3GPP TSG RAN to start in December 2015
 - Requirements and scope of new radio will be established by RAN in the SI (Study Item) starting in December 2015
 - The study should assume no phasing, nor aim to conclude on any phasing. Requirements should be defined for all identified use-cases.
 - WGs will then proceed with the evaluation of technology solutions in another SI starting in March 2016
- Study Item in 3GPP TSG SA WG1 ongoing
 - Looking for inputs on use-cases
- Study Item in 3GPP TSG SA WG2 expected to start December 2015
 - Will look for inputs on 5G architecture
- Channel modeling
 - Contributions generally welcome
 - Closing date not determined, likely within 6-12 months

3GPP Time-line

- Phase 1 until H2 2018
 - Phase 1 to be completed by H2 2018 to address a more urgent subset of the commercial needs
 - There is no consensus yet what is the “urgent subset of the commercial needs”
 - This maps to 3GPP Rel-15
- Phase 2 until December 2019
 - Phase 2 to be completed by December 2019 for the IMT 2020 submission and to address all identified use-cases and requirements
 - This maps to 3GPP Rel-16

5G-PPP research project impact

- Scenarios and use-cases need to be disseminated from the H2020 projects urgently to impact the 3GPP RAN and SA work.
- Channel model results need to be disseminated from the H2020 projects urgently to impact the 3GPP RAN work.
- The H2020 projects need to be agile to adapt to the contents of the 3GPP normative phases and timely disseminate appropriate technical results.
- Next, architecture results may be disseminated from the H2020 projects to impact 3GPP SA2

Technology areas frequently mentioned at 3GPP RAN 5G Workshop

- New Carrier
- New waveform/Numerology
- Massive MIMO enhancements
- Latency reduction techniques
- mmWave communications
- Non-Orthogonal Multiple Access
- Adaptive frame structure, Flexible frame structure
- Cell virtualization
- User-centric (NFV/Slicing, RAN virtualization)
- Ultra Dense Network
- Advanced MIMO/beamforming
- Focus on TDD
- Less network broadcast, reduced or no periodic transmission
- Flexible Duplex
- Symmetric UL/DL PHY (e.g. MC-OFDM)
- eD2D
- Small cells
- Dynamic TDD
- Wireless Mesh (D2D)

Thank you for your attention!
