

Euro-5g – Supporting the European 5G Initiative

D3.2: Promotion strategy

Version: v0.3

Deliverable type	R (Document, report)
Dissemination level	PU (Public)
Due date	30/09/2015
Submission date	
Lead editor	Frederic PUJOL (IDATE)
Authors	Giulia Pastor and Jacques Magen (IINV), Carole Manero and Frederic Pujol (IDATE), Sara Martello and Giovanni E. Corazza (UNIBO), Monique Calisti (MARTEL)
Reviewers	
Work package, Task	WP3, T3.2
Keywords	annual journal, newsletter, promotion, publications, web portal

Abstract

D3.2 Promotion strategy (M3) - details the promotion strategy of the project, as defined by Task 3.2 (Promotion strategy and dissemination - M1-M24). This document presents how the various publications will be promoted and disseminated, the targeted audiences, targeted events and communities, etc. and provide specific information on how Euro-5G will support 5G community building.

Executive Summary

D3.2 Promotion strategy (M3) - details the promotion strategy of the project, as defined by Task 3.2 (Promotion strategy and dissemination - M1-M24). This document presents how the various publications will be promoted and disseminated, the targeted audiences, targeted events and communities, etc. and provide specific information on how Euro-5G will support 5G community building.

The promotion strategy is managed and updated through the "5G-PPP innovative information system", which will maintain a dynamic 5G web site with a dedicated blog highlighting the new achievements and developments within the European 5G-Initiative. The web site will provide a "one-stop" shop for 5G activities. It will be based upon the existing www.5gppp.eu website. The 5G web site will contain sub-sections on publications, information on 5G conferences, workshops, webinars, 5G European R&D projects, international 5G activities outside Europe, regulation and spectrum news, press releases and articles.

Main publications planned to support the promotion will be the following:

- The European 5G Annual Journal (two issues)
- Quarterly 5G-PPP Newsletters will be published on the 5G PPP portal (<https://5g-ppp.eu>). The newsletters will present the main issues in discussion, interviews with programme and project representatives, and summary of main achievements in the period as well planned activities for upcoming periods. Monthly Newsflash will be published in order to provide brief updates on the programme to a wide public.

Euro-5G will carry on the work already started in previous projects such as NetSoc and 5-Alive in the production of promotional material.

1 Introduction

D3.2 Promotion strategy (M3) - details the promotion strategy of the project, as defined by Task 3.2 (Promotion strategy and dissemination - M1-M24).

This task is led by IDATE, supported by InterInnov (responsible for the promotion material), 5G-I-A, Nokia Net, and Orange

1.1 Objective of the document

This document identifies the activities related to the promotion strategy of the project covering its definition and implementation, support for 5GPPP spokesperson, publications and promotion material.

1.2 Structure of the document

Section 1 is the present section which details the objective of this document and its structure

Section 2 presents strategy definition and implementation

Section 3 details support for 5GPPP spokesperson

Section 4 presents the main publications planned to support the promotion

Section 5 lists activities planned for promotion material

2 Strategy definition and implementation

This section describes how the various publications will be promoted and disseminated, the targeted audiences, targeted events and communities, etc.

2.1 Collection of inputs / interaction with projects

The objective is to support and coordinate promotions & Public Relations activities among the 5G-PPP projects, the 5G Infrastructure Association and Networld2020.

2.1.1 Maintenance of information flow

We have established direct contacts with 5G European R&D projects and a dedicated team is tracking 5G activities on a day-to-day basis in order to quickly integrate important news. The communication flow also includes wide community, e.g. by through liaison with the Networld2020 ETP and other relevant communities and stakeholders.

2.1.2 Communications and Dissemination mail list

A 5G-PPP Communications and Dissemination mail list has been established “Comms@5g-ppp.eu” in order to allow the multiple interactions about common presentation materials, brochures, flyers, webs, tweets, etc., and preparations for joint events to work efficiently between the people responsible in the projects. We estimated that this approach will be more efficient than filtering everything through the overworked project leaders.

2.2 Dissemination and awareness creation activities

2.2.1 Web site

As part of the comprehensive communication strategy, the “5G-PPP innovative information system” maintains a dynamic 5G web site with a dedicated focus on achievements and developments within the European 5G-Initiative. The web site will provide a “one-stop” shop for 5G activities. It is based upon the existing www.5gppp.eu website and is hosted by Eurescom.

The 5G web site contains sub-sections on publications, information on 5G conferences, workshops, webinars, 5G European R&D projects, international 5G activities outside Europe (e.g. Japan, South Korea, China, USA, 5GRUS by Russia’s Icom-Invest), regulation and spectrum news, press releases and articles.

- o PPP Structure

The 5G Infrastructure Public Private Partnership, in short 5G PPP, has been initiated by the EU Commission and industry manufacturers, telecommunications operators, service providers, SMEs and researchers. The 5G PPP will deliver solutions, architectures, technologies and standards for the ubiquitous next generation communication infrastructures of the coming decade.

5G PPP @ ICT 2015

Upcoming Events

5G PPP Video

Figure 1: The 5G PPP portal

The web site could also include a dedicated blog highlighting the new achievements and developments within the European 5G Initiative.

Periodic reports such as quarterly newsletters and monthly intra-program updates will keep the community and the participants informed about 5G progress.

2.2.2 Further web channels

A dedicated YouTube channel where all 5G PPP projects can post their own videos has been set up (<https://www.youtube.com/channel/UCY8mTTwrDoMI35vGkiKq1Eg>). The videos are also relayed on the 5G PPP web site (<https://5g-ppp.eu/video/>).

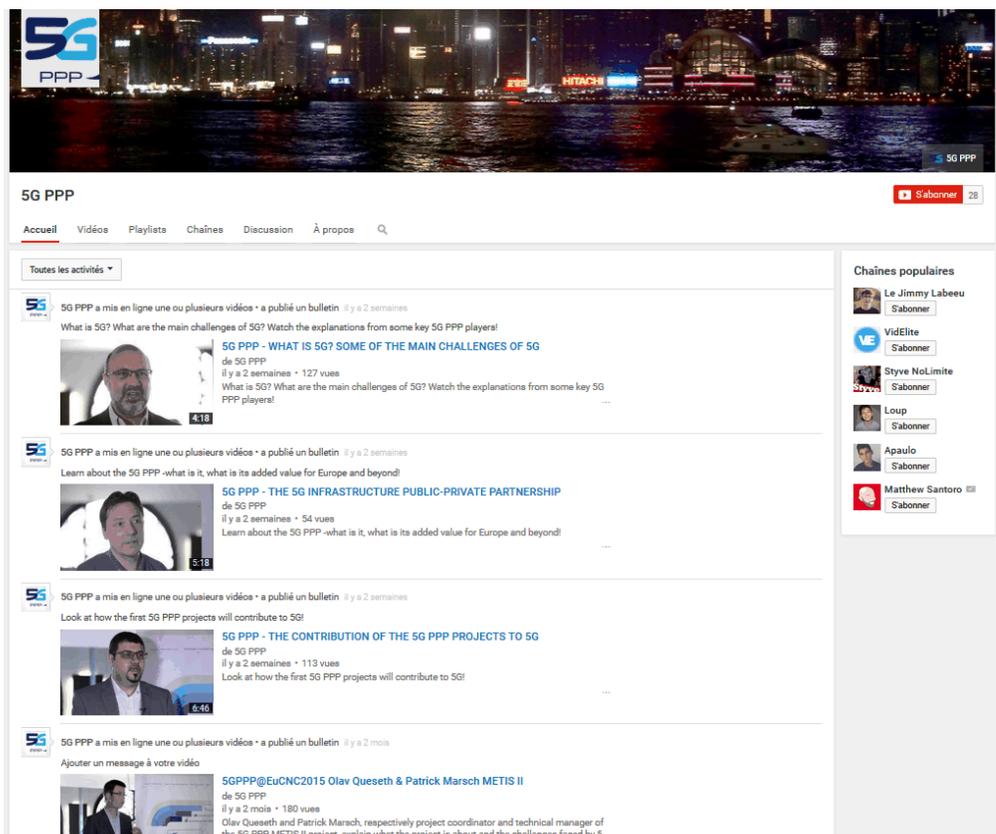

Figure 2: The 5G PPP YouTube channel

A 5G PPP Twitter account is also used to relay information on the various events (MoUs, conference, press release from H2020 projects, international 5G news...).

2.2.3 Targeted events and communities

Community building and stakeholders' identification: an innovative approach

As indicated in the DoA, the Euro-5g Project intends to intensively work in an innovative way to build a 5G community, which will work towards the goals of the 5G PPP and the 5G Infrastructure Association.

First of all, the Euro-5g project will ensure the coordination of community building and stakeholders' engagement activities performed separately by each project. The Euro-5g Project will build a list of stakeholders to be engaged at 5G-PPP level, which will complement and at the same time be consistent with those at each project level.

This activity will use in a first instance the stakeholders' identification methodology developed by InterInnov in the INFINITY² and XIFI³ projects. Initially, a glossary and a picture (which graphically summarizes the stakeholders' categories)⁴ will be defined, in order to ensure that the same terms mean the same thing in all the project's documents and deliverables, and to determine for each project which stakeholders need to be involved and for what purpose. Then, a short questionnaire on stakeholders will be prepared and sent out, in order to better understand what stakeholders each project will be targeting, in order to redefine the strategy of the 5G PPP as a whole, refine the stakeholders priority,

² <http://www.fi-infinity.eu>

³ www.fi-xifi.eu

⁴ <https://www.fi-xifi.eu/about-xifi/stakeholders.html>

and see how the events planned at national/regional/local level are in line *-in terms of coverage-* with the programme's strategy. Thanks to this approach, the Euro-5G project will be able to define a detailed list of stakeholders at 5G PPP level and engage them in a coordinated and complementary manner with all the projects.

Secondly, to achieve the ultimate objective of building and maintaining a 5G community, the Euro-5g project will build upon the experience gained in FIRE where both InterInnov and Martel initiated the "FIRE Board" with the purpose of strengthening the cooperation among FIRE projects, and more recently the "FIRE Forum" to engage more efficiently with external stakeholders. This experience would need however to be tuned to the needs and the governance structure of the 5G PPP, where a Steering Board already exists; still the idea of a "forum" to engage with external stakeholders could be considered. Euro-5G also intends to use a new innovative approach to ensure a significant community feedback and involvement; this approach is called "collective intelligence", developed by the FP7 project CATALYST (<http://catalystfp7.eu>).

The CATALYST idea is to create an ecosystem of "collective intelligence"⁵ software programs that will help harvest the vast amount of data and knowledge that develop in social media as well as facilitating collective ideas, creativity and citizen engagement.

The Euro-5g project will develop a "collective intelligence" platform looking at developing 5G concepts, and technologies. The project is planning this platform to achieve two main objectives:

- To advance 5G concepts and technologies in a collaborative manner, and
- To promote and advertise the results of the 5G PPP to the community.

In order to do so, Euro-5G intends to use a tool called "Assembl"⁶, developed within the above-mentioned CATALYST project. "Assembl" allows hundreds (or more) people to work together; people involved may discuss and debate following a method that "elevates the intelligence of the group"⁷. This tool is different from other networking /sharing tools as roles are assigned to users:

- The Orchestrators – individuals who help formulate the problem, determine the type of document that will be created, set up the pace and decide the constitution of the workgroup (open, semi-open, closed; small, medium, large; with or without deadlines, etc.)
- The Harvesters – individuals who extract the key ideas from each message and who structure the table of ideas, making the messages accessible and manageable.
- The Synthesizers – individuals who create summaries of the key ideas and submit the syntheses to the group for "rough consensus" or line-by-line voting. These summaries also help keep the debate moving forward and allow newcomers to get an overview of what has happened.⁸

These roles are designed to stimulate the content submission allowing for more productive conversations.

Thanks to this tool, *ad hoc* discussions, debates, conversations will be generated by the 5G PPP community and stimulated by the Orchestrator, the Harvesters and the Synthesizers, who will help the Community to achieve the goals of the discussion and to consolidate the debate into a written deliverable (which could be, for example, the synthesis of the discussion, a white paper, a roadmap on standardisation, a policy recommendation, etc.). This tool will allow the 5G Community to create an intense debate in a harmonised way. In addition, Assembl will help the growth of the 5G Community

⁵ The collective intelligence is described as "a way of thinking that connects people so that, collectively, they act more intelligently and creatively than they would as individuals". The concept behind collective intelligence is that "benefit is greater when ideas are pooled and discussed than if people acted on an individual basis". Please see: <http://imaginationforpeople.org/en/i4p/assembl/>

⁶ <http://imaginationforpeople.org/en/i4p/assembl/>

⁷ Ibid.

⁸ Cf. <http://assembl.org/faq/>

as a whole and the interaction with other initiatives outside the 5G PPP community. Thanks to the direct link between the platform and the social media, the synthesis of the on-going discussion will be automatically shared on the project's social media, disseminating the discussion's results and encouraging the scientific community interested in the topic to join the debate.

With reference to the events organisation, this tool could also help the 5G Community to facilitate the content design and programming with the help of interested attendees. In addition, after the event, Assembl will ensure that the participants remain connected on key discussions that expand the topics presented. This helps perpetuate the impact of the event and minimizes the 'one time' characteristic of any conference⁹.

At M3, Euro-5G organised a conference call with the representatives of Assembl, in order to see whether the platform and tool could help and be used for the purpose of the 5G PPP to implement the following activities:

- Support the interaction among the 5G PPP projects in order to advance 5G concepts and technologies in a collaborative and innovative manner
- Support the interaction among the 5G PPP projects looking at discussion fora for new innovative ideas
- Improve the interaction inside the 5G PPP
- Enlarging the community
- Interact with other initiatives outside the 5G PPP community
- Organise and support community events.

In the short term, the strategy for community building is twofold:

1. Identify the targeted stakeholders and communities for the 5G PPP;
2. Define if and how the Assembl tool could be used to support the activities listed above.

Task 1.1 "5G community building and support" will look into defining how it could best support the other WPs and Tasks of Euro-5G as follows:

- General activities
 - Support the interaction among 5G PPP projects
 - Interact with other relevant projects and initiatives
 - NetWorld2020, other European projects, broader community
 - Establish and maintain dialogue and information flow with the entire related community
 - New method and tool based on the "Imagination for People" platform with the "Assembl" tool (cf. above)
 - Organise and support community events (along with T2.5 "events organisation and participation")
- First activities
 - Define what should be the primary focus to start with e.g. enlarging the community, better interaction inside the 5G PPP
 - Identify how the proposed platform and tool could help and be used for the purpose of the 5G PPP (activity started, to be continued, cf. above)
 - Define priorities and first activities based on priorities defined in the other WPs (cf.

⁹ Cf. <http://assembl.org/uses/events/>

below)

- Follow up on activities from 5-Alive e.g. 5G PPP brokerage event at ICT2015

Support from the community building activities to the other Euro-5G WPs (i.e. indirectly to the 5G PPP) have been drafted as follows, to be further detailed in the short term:

- Support to WP2 (governance)
 - Help in the efficient interaction between the various bodies e.g. Partnership Board and Steering Board, help build up the most efficient Working Groups (and not replicate), etc.
 - Ensure some consistency of the 5G PPP overall with respect to activities such as:
 - all calls for participants to 5G-PPP boards and working groups are accessible to all 5G-PPP projects and 5GInfrastructure Association Members (T2.2)
 - All action lists of 5G-PPP boards and working groups are distributed within the appropriate group and do not contravene to the objectives of the 5G-PPP (T2.2)
 - Encourage public consultations (T2.2)
 - See how the platform and tool could prove useful to support T2.4 “programme support infrastructure” (interaction within the 5G PPP)
 - Support T2.5 “events organisation and participation” to gather the relevant 5G community (beyond the 5G PPP) e.g. by identifying the relevant actors (e.g. startups and SMEs) from the FIWARE accelerators, Startup Europe, etc. *–could be via open calls in later 5G PPP calls as well*
 - Support in making the communication tools (MS4/MS2.1) consistent with the community building strategy –draft at M1 but we need to make the mailing lists, etc. more relevant
- Support to WP3 (communications)
 - Support strategy for 5G PPP promotion by identifying the relevant community/ies to be involved
 - Support the set-up of the communication hub by identifying and involving the 5G PPP projects and other relevant projects and initiatives
 - Identify communities to be targeted for the European 5G Annual (and/or possibly a summary brochure for public dissemination)
 - Support the set-up of an efficient interaction between projects and Euro-5G to make sure that when projects want to publicize news, results, etc. we can collect the information and release it timely
 - Identify and involve the relevant community/ies into the blog(s) –also promote this to the 5G PPP project partners where individuals could post alternate/innovative ideas
- Support to WP4 (international cooperation)
 - Identify the relevant target groups beyond Europe for promotion and dissemination activities
 - Check what is going on with FIF / CeFIMS for interaction with the Member States
 - Identify and involve the relevant 5G initiatives and communities (and public authorities?) within and beyond Europe? Help interact with the INCO and ICT

bilateral projects (from joint calls) related to those countries?

- WP5 (working groups)
 - Help build up the most efficient Working Groups (and not replicate) (also in relation with WP2) e.g. between the 5G Vision WG and the NetWorld2020 Expert Group, the activity on 5G experimentation strategy and the white paper from the NetWorld2020 Expert Group, etc.
 - Engage SMEs into the “collective intelligence” concept if relevant (T5.5)

Additional support to high-level meetings and interactions (e.g. at C-level) will also be redefined as part of Task 1.2, as the original objective of Task 1.2 “Support for Advisory Group” is no longer valid as there is no Advisory Group in the 5G PPP structure (although it was originally planned).

Events participation and organisation

Even though event participation and organisation is managed in Euro-5g within work package 2, namely Task 2.5 Events, led by Martel, is dedicated to that, it is important to coordinate this activity frame with the promotion work done within WP3 and with the support of the community building activities from WP1. As a matter of fact participation to relevant events and organisation of dedicated sessions, workshops and main conferences are essential to ensure broad visibility of the project’s work and outcomes (WP3) and, as already presented above, an important way of reaching out target communities and stakeholders (WP1). In this perspective close coordination between WP3, WP2 and WP1 has been established from the very beginning of the Euro-5g project.

This will allow to maximize the impact of the project’s promotional activities overall, but also to offer to the various ongoing 5G PPP projects an entry door to coordinate on promotional efforts at a programme level. About events’ organisation and participation, specific coordination procedures have been established together with the leader of Dissemination & Communication activities of the various 5G PPP projects so as to make sure all players in the arena can benefit from a coordinated plan on which events to attend and/or organise. The same process is likely to be used for the community building activities.

More details about events’ organisation, management and support is planned to be provided *in D2.3 Intermediate report on 5G programme governance and operation including event support* due at M12.

3 Support for 5G PPP spokesperson

This section describes how the 5G PPP spokesperson, which will be selected by members of the 5G Infrastructure Association, will be supported for her/his work during the project.

⇒ **This section cannot be finalised now as the person will likely be nominated early 2016.**

4 Main publications planned to support the promotion

In addition to standard methods of dissemination, such as websites and emails, we suggest to annually publish a yearbook and send quarterly newsletters, monthly bulletins and flashes.

Quarterly, monthly publications and flashes will be the main means for dissemination of technical results oriented towards specialist staff.

The idea is to produce a large pile of publications during all the project duration. About 1/3 of publications should be released each year. All partners will be involved in the dissemination process and papers.

A visual layout will be designed for all the papers before starting (a template will be defined for the e-newsletters).

4.1 The European 5G Annual Journal

The European 5G Annual Journal (two issues) - is a communication tool targeted at promoting Euro5G actions and initiatives through a high-profile, reliable, and informative medium. It will be produced in collaboration with the H2020 projects to extract their exceptional achievements and to present them in the best possible way for broad public, but also presenting technical programme achievements on high-level for wide spectrum of researchers and managers.

Hereafter follows our preliminary proposal for the Euro5G yearbook structure.

Item name	Suggested content	Number of pages
Cover	<ul style="list-style-type: none"> Title/sub title Euro5G Logo and color scheme 	1 page
Forewords	<ul style="list-style-type: none"> Presentation Objectives 	1 page
Introduction and context	<ul style="list-style-type: none"> Challenges of the industry Forward-looking opening section: ten key results/topics/issues in the past year Euro-5G role and other H2020 projects Significant past milestones – timeline Major expected innovations Status at the beginning 	2-3 pages
Abstracts per project	<ul style="list-style-type: none"> Chart Main figures/timeline “Who does what” for each project Objectives/results 	1-2 pages per project (depending on the size of the project)
5G thematic chapters	<ul style="list-style-type: none"> Objectives Key figures Significant milestones Main means used Results 	
Project detailed	<ul style="list-style-type: none"> Detailed description 	

description	<ul style="list-style-type: none"> • Detailed timeline • Detailed objectives and results 	
Main events during the past year	<ul style="list-style-type: none"> • Presentation of main events/ results/ conference... 	1 page per event
Glossary		1 page
Index		1 page
Partner presentation	<ul style="list-style-type: none"> • Main activities 	1 page per partner
Cover	<ul style="list-style-type: none"> • What is at stake for 5G? • Contacts 	1 page

Table 1: European 5G annual journal structure

The 5G thematic chapters will present the 5G research and development progress. The objective is to focus on innovations developed in European 5G projects and to monitor progress regarding the main challenges such as latency, data rate, capacity, energy consumption, etc. The following chapters are proposed for the first edition of the European 5G Annual Journal:

- 5G international cooperation
- 5G in the telecommunications sector
- 5G use cases
 - Including vertical sectors (and the Internet of Things) and 5G
- 5G business models
 - Including vertical sectors (and the Internet of Things) and 5G
- Research and innovation
 - Spectrum issues
 - Radio interface & RAN (Radio Access Network) design
 - Core network
 - Virtualisation
 - Energy efficiency
 - Latency
 - Flexibility
 - Backhaul /Fronthaul developments
 - Security issues
 - ...
- 5G network trials and announcements
- Standardisation
- ...

4.2 Newsletters

Quarterly 5G-PPP Newsletters will be published on the 5G PPP portal (<https://5g-ppp.eu>). The newsletters will present the main issues in discussion, interviews with programme and project representatives, and summary of main achievements in the period as well planned activities for

upcoming periods. Monthly Newsflash will be published in order to provide brief updates on the programme to a wide public.

The quarterly newsletter will consist of 8-10 pages and will be designed to act as a regular and direct link between Euro5G and other 5G PPP projects. It is also targeted at the industry. Quarterly newsletters should deliver summary views on hottest topics in 5G and give readers inputs on steps, achievements and potential results.

Hereafter follows our preliminary proposition for the Euro5G quarterly newsletter structure. The quarterly newsletter could also be focused on transversal topics (1 topic per deliverable for example).

Item name	Suggested content
Project news	Identification of recent results Summary of past major results (between 2 issues)
Hot topics	International cooperation announcements Technological achievements Regulatory evolutions (new spectrum management schemes, work of new frequency bands, compatibility studies ...)
Past events	Summary of past events Detailed presentation the major event/piece of news/result
Future events	Presentation of future events (2 max)

Table 2: Newsletters structure

4.2.1 Monthly updates

The monthly update will consist of 3-4 pages. It will focus on updating information for the reader. It will explore timelines, news of transversal topics (such as spectrum issues, radio interface & RAN design, core network, virtualisation, energy efficiency, latency, flexibility, backhaul /Fronthaul developments, security issues...), the progress made in projects synthetically. The updates will also cover the news related to:

- International agreements and cooperation
- Standardisation news
- Regulation news
- Conferences
- Demos
- Press releases announcing relevant progress
- ...

4.3 Social media channels

All kind of announcements from the programme will be made to the public through the social media channels mentioned below:

- The 5G PPP portal: www.5gppp.eu
- The dedicated YouTube channel where all 5G PPP projects can post their own videos (<https://www.youtube.com/channel/UCY8mTTwrDoMI35vGkiKq1Eg>)

- Twitter: <https://twitter.com/5gppp>

4.4 Distribution channel

The European 5G annual journal will be published on the 5G PPP portal (<https://5g-ppp.eu>). It will also be sent by email to the European Commission, 5G PPP members and to a list of identified stakeholders.

Announcements regarding the publications of the annual or quarterly newsletters will be also made through the social media channels.

5 Promotion Material

Euro-5G will carry on the work already started in previous projects such as NetSoc and 5-Alive in the production of promotional material. The activities planned at this stage in the project are listed in the table below.

Objective described in the Euro-5G DoA	Revised/refined objective at this stage (M3)
<p>Layout and printing of flyers, posters, other materials as needed but at least two sets of the material – by M6 and M18 (tentative planning to be aligned with overall programme activity plan); The first set of material will primarily look at explaining the objectives of the projects in a consistent manner, trying to show the potential achievements for 5G from the 5G-PPP as a whole; and the second set will focus on results and achievements in a similar manner. In addition, we are also planning to release 4 specific flyers focusing on specific aspects e.g. vision and roadmaps, standardization, SMEs, innovation... to be decided during the course of the project. Those flyers will be released whenever it is deemed relevant.</p>	<p>Existing material released by the 5-Alive project includes the “5G vision” brochure as well as a description of the 5G PPP Call 1 projects. In this sense we consider that the “first set of material will primarily look at explaining the objectives of the projects in a consistent manner, trying to show the potential achievements for 5G from the 5G-PPP as a whole” is already released. Euro-5G will therefore focus on specific requests concerning promotional material to be made available for specific events e.g. on verticals, in addition to the original plan for “4 specific flyers focusing on specific aspects e.g. vision and roadmaps, standardization, SMEs, innovation... to be decided during the course of the project.”</p>
<p>With the same idea in mind, two 5G videos will be realised, one at the beginning to present the various projects and advertise the objectives that they have, at the level of each project and also at programme level; and one at the end to present intermediate results. There will likely be a mix of interviews and animations. In addition, a dedicated 5G PPP YouTube channel will be put in place and will collect the videos and animations produced by all 5G PPP projects, and arranged in a consistent manner, also in relation with the 5G PPP web site (Task 3.1).</p>	<p>5-Alive has released 5G videos that comply with the objective to “present the various projects and advertise the objectives that they have, at the level of each project and also at programme level”. A dedicated 5G PPP YouTube channel is available, as well as a specific video page on the 5G PPP web site. Therefore Euro-5G proposes to focus its effort on a new animated video on 5G and 5G PPP, that could be released by M12; and, as planned, on collecting videos from the projects and producing another video with intermediate results from the project (e.g. between M12 and M18 depending on the actual outcomes from the projects).</p>
<p>Templates (PPT, Word, e-newsletters) will be used by the Euro-5g project and will be provided to all 5G-PPP projects to ensure a consistent layout for 5G PPP. They will be based on the templates already available for 5G-PPP (as produced by the former NetSoc project). The templates and maybe the 5G-PPP logo may be revised or tuned during the course of the project to stay up to date with the latest high-level communication standards we are aiming at for the 5G-PPP.</p>	<p>Templates already released will be refined and provided to all 5G-PPP projects to ensure a consistent layout for 5G PPP.</p>
