

5G EVE

5G European Validation platform for Extensive trials

2020, October 14th, 5G Workshop on "5G Experimentation
Facilities and Vertical Trials

Mauro BOLDI, TIM S.p.A., Project Coordinator

This Project has received funding
from the EU H2020 research and
innovation programme under
Grant Agreement No 815074

The vision of 5G EVE's E2E Validation Platform

From: Two Worlds

To: One Innovation Ecosystem

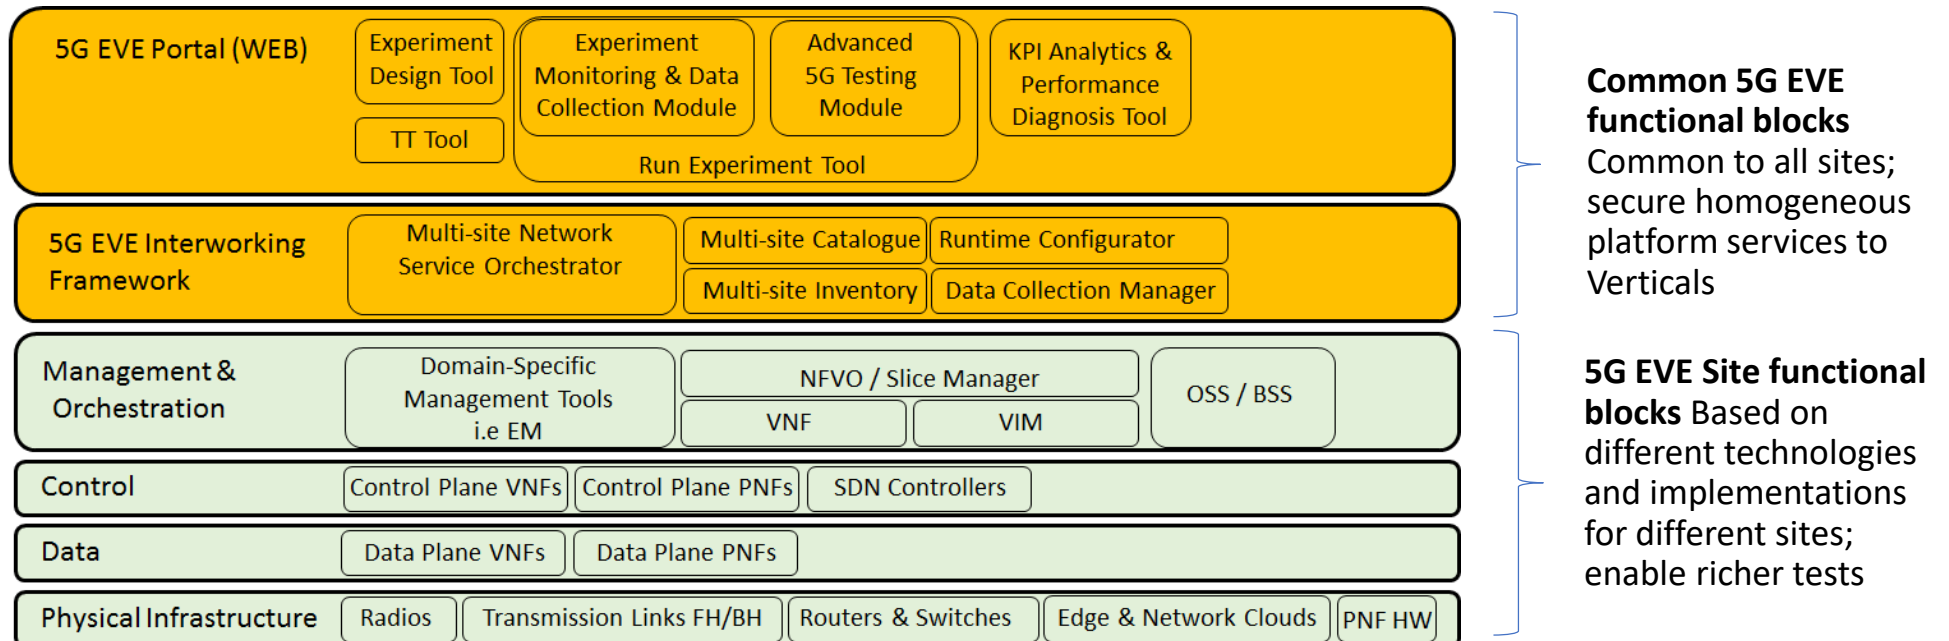

This Project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 815074

5G EVE

5G EVE Architecture - Platform View

- 5G EVE Platform functional architecture can be grouped in two main groups: **Common functional blocks** (common to all sites) and **site specific functions blocks** which could have different technologies and implementation on each site

5G EVE Architecture - Key 5G EVE innovations

1

**Intent-based interface
towards verticals**

A disruptive intent-based interface to simplify the access to the 5G end to end facility, specifying "what" is asked without details on "how" it is provided.

2

**Multi-domain slicing
and orchestration**

A new orchestration framework with the necessary features able to manage effectively multiple site facilities, dramatically improve efficiency, prevent overload, and easily manage migration of networks components, while meeting performance requirements.

3

**Performance Diagnostics
(KPI Framework)**

A completely new performance diagnosis mechanism and a new monitoring framework enabling the capturing of service and slice performance indicators, providing insight on performance.

4

**5G VNF's
(Openness Framework)**

A new framework to provide a modular, reusable set of different SFs enabling the coexistence of proprietary and open source technologies; this will allow the modular replacement and chaining of components implemented with open and novel performance acceleration techniques.

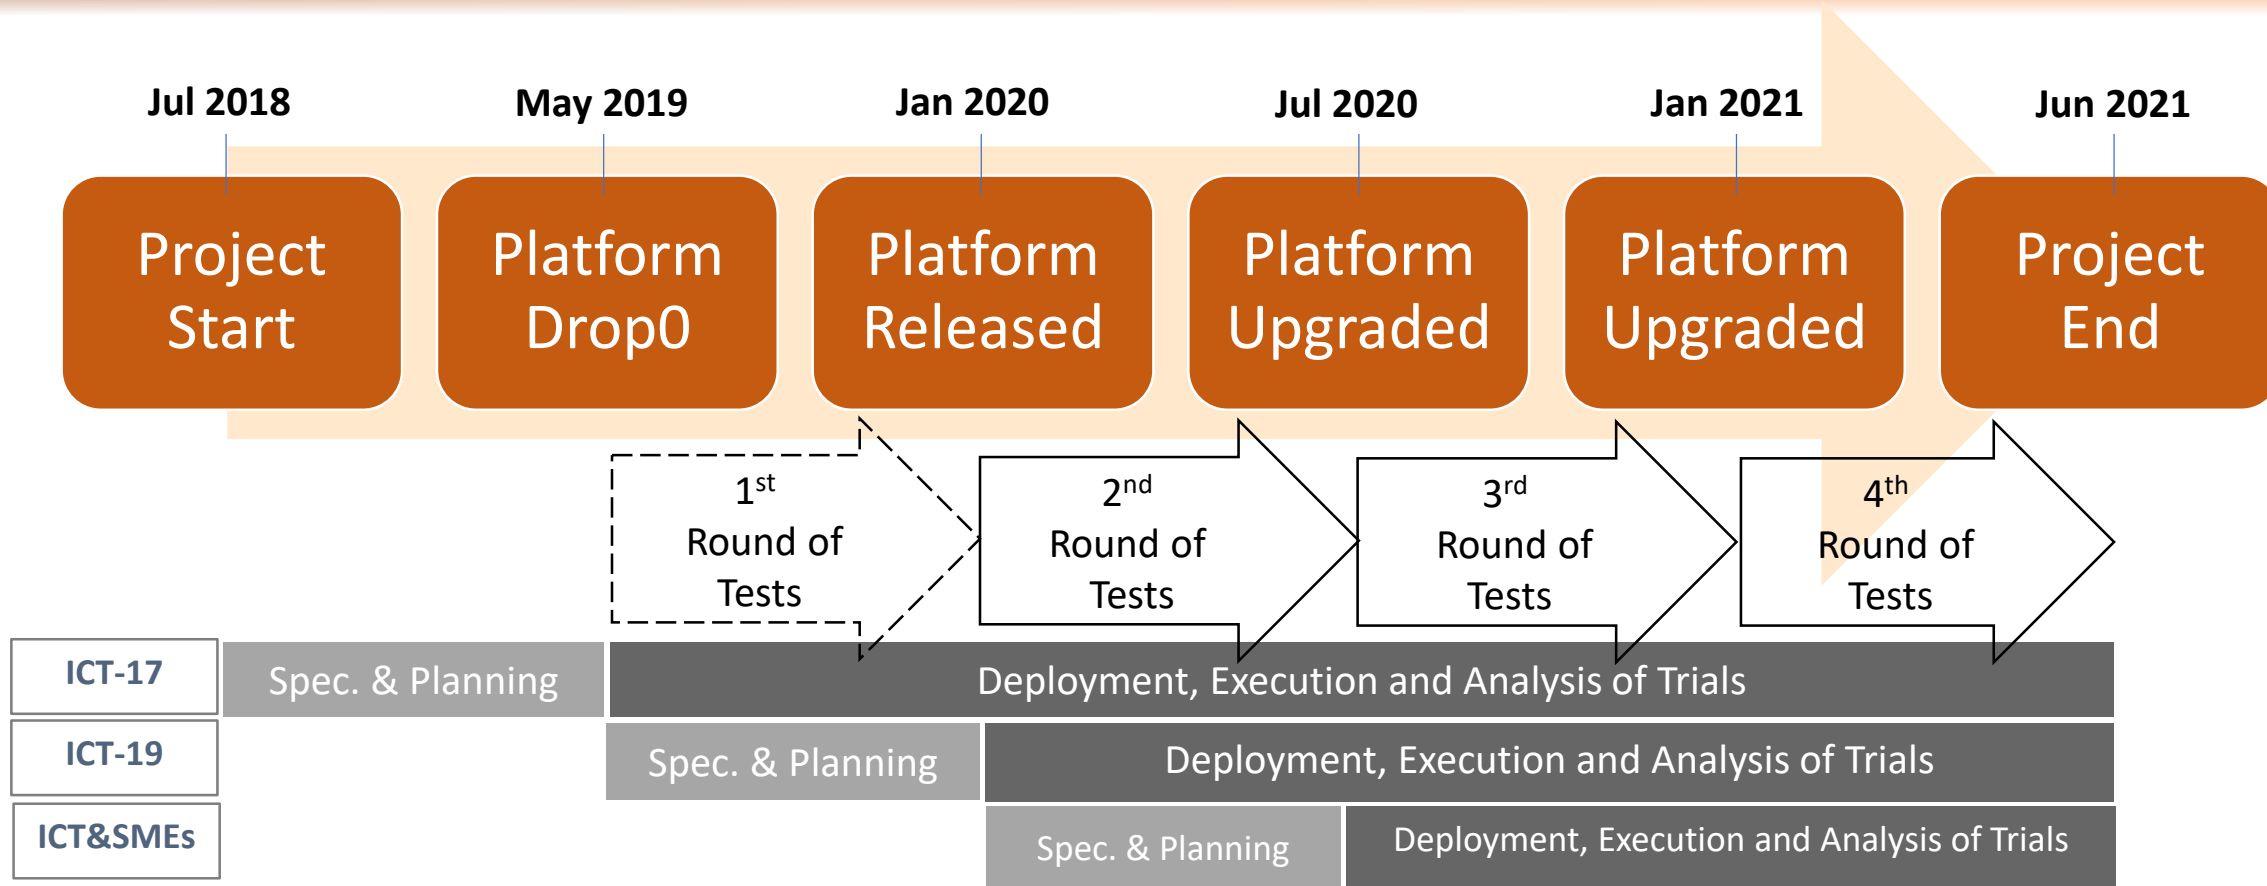

This Project has received funding
from the EU H2020 research and
innovation programme under
Grant Agreement No 815074

5G EVE

5G EVE Roadmap – General Time-line

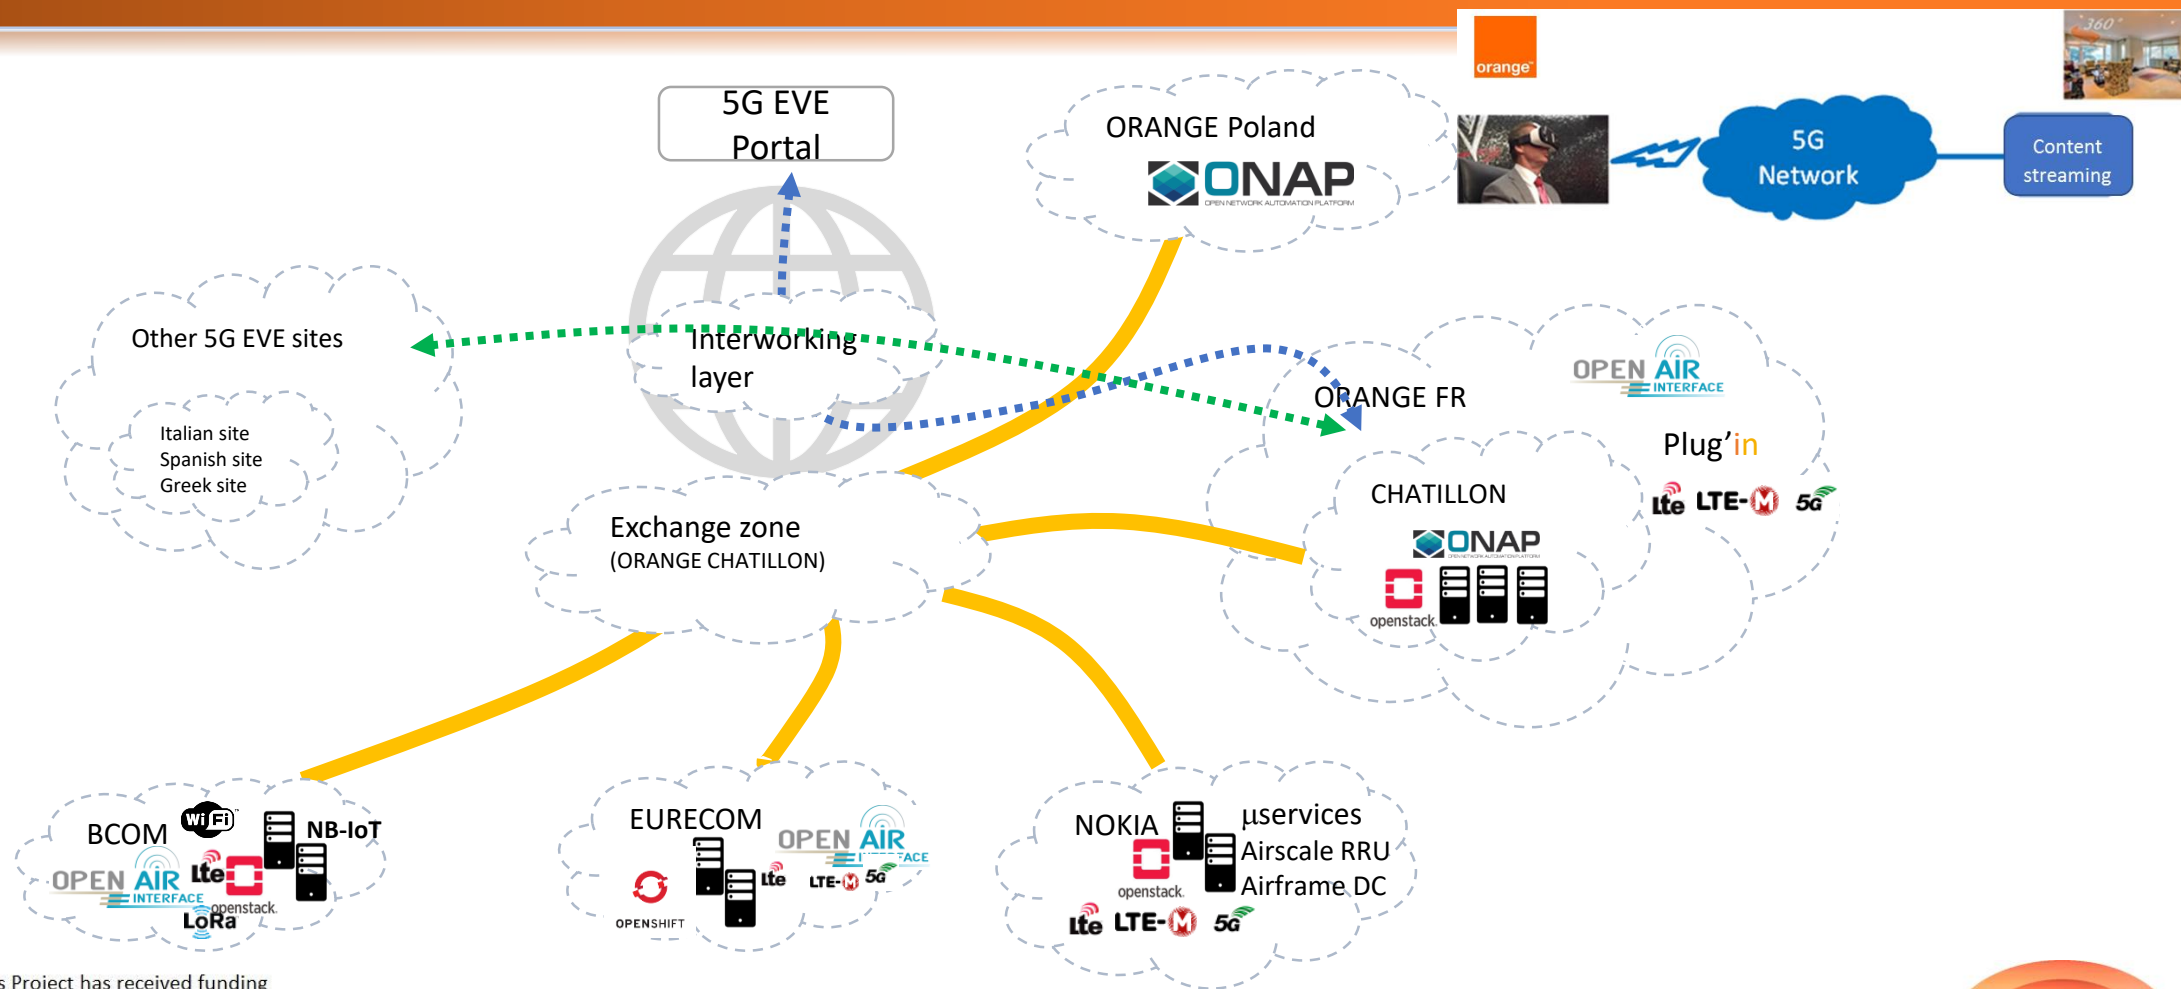

This Project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 815074

5G EVE

French Site Facility - Concept

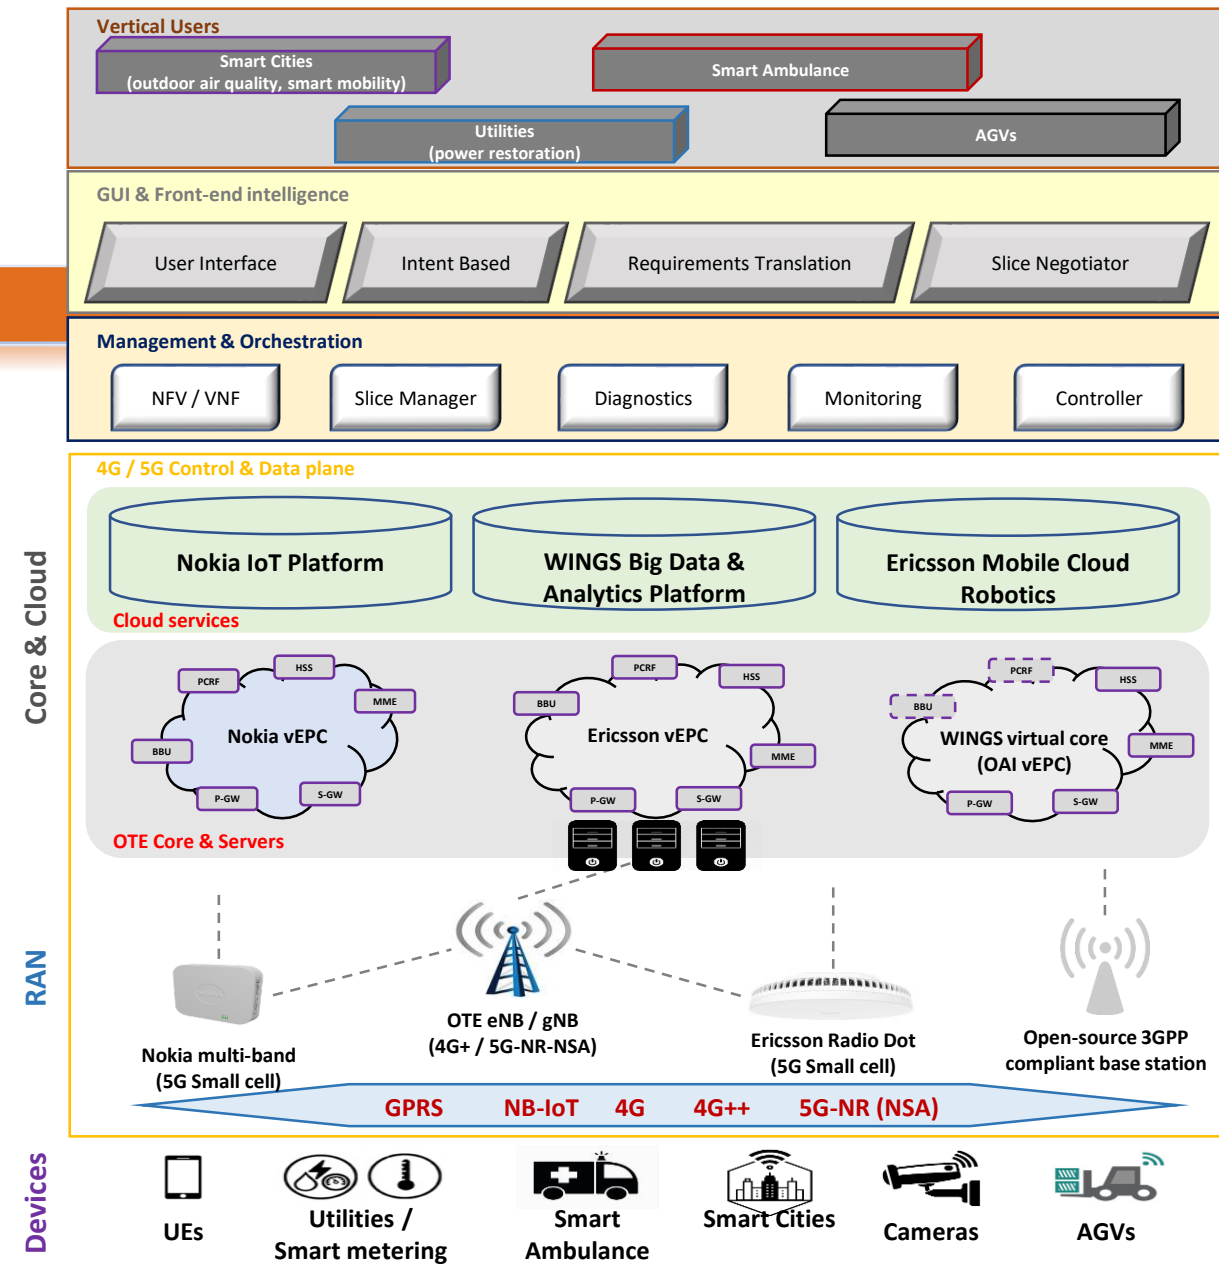

This Project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 815074

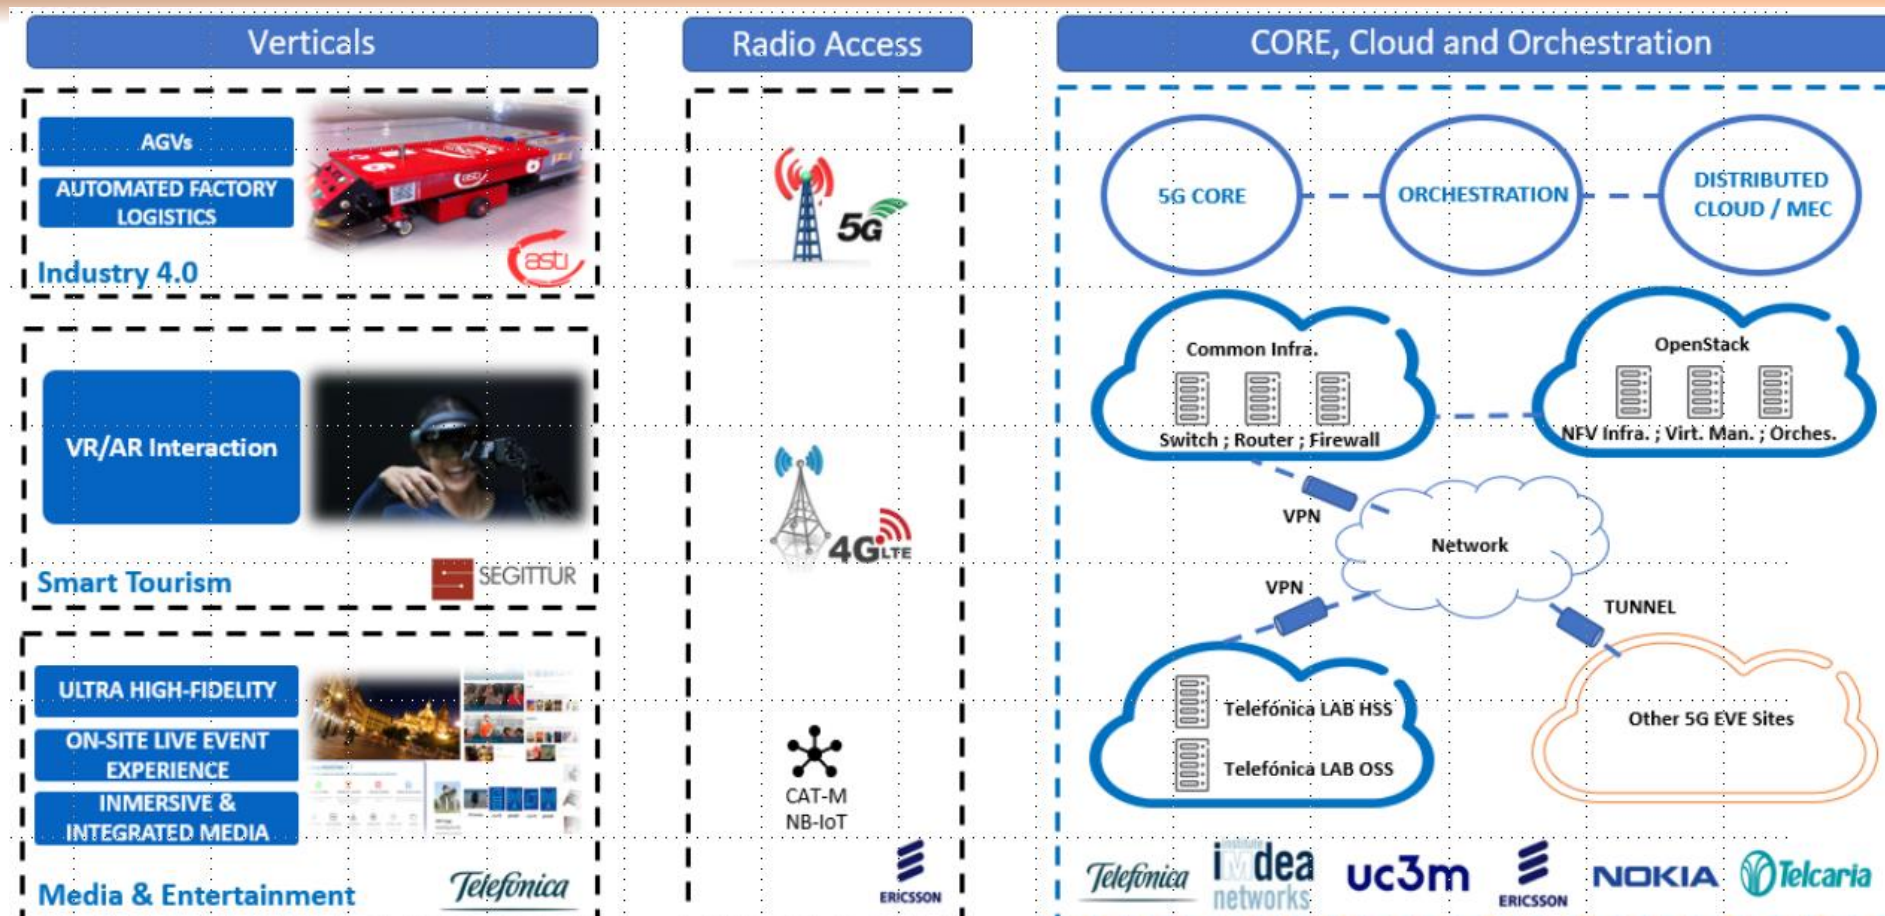

5G EVE

Greek Site Facility - Concept

- The Greek 5G EVE site facility covers a region of Northern Athens, around the R&D site of the **Greek National Telecommunication Organization (OTE)**
- **OTE, Ericsson GR, Nokia GR and WINGS** are responsible to prepare and upgrade the Greek site facility to be able to handle three **5G-oriented vertical use cases**
- The facility will be offered to vertical industries for execution and validation of pilots with full sets of 5G capabilities

Spanish Site Facility - Concept

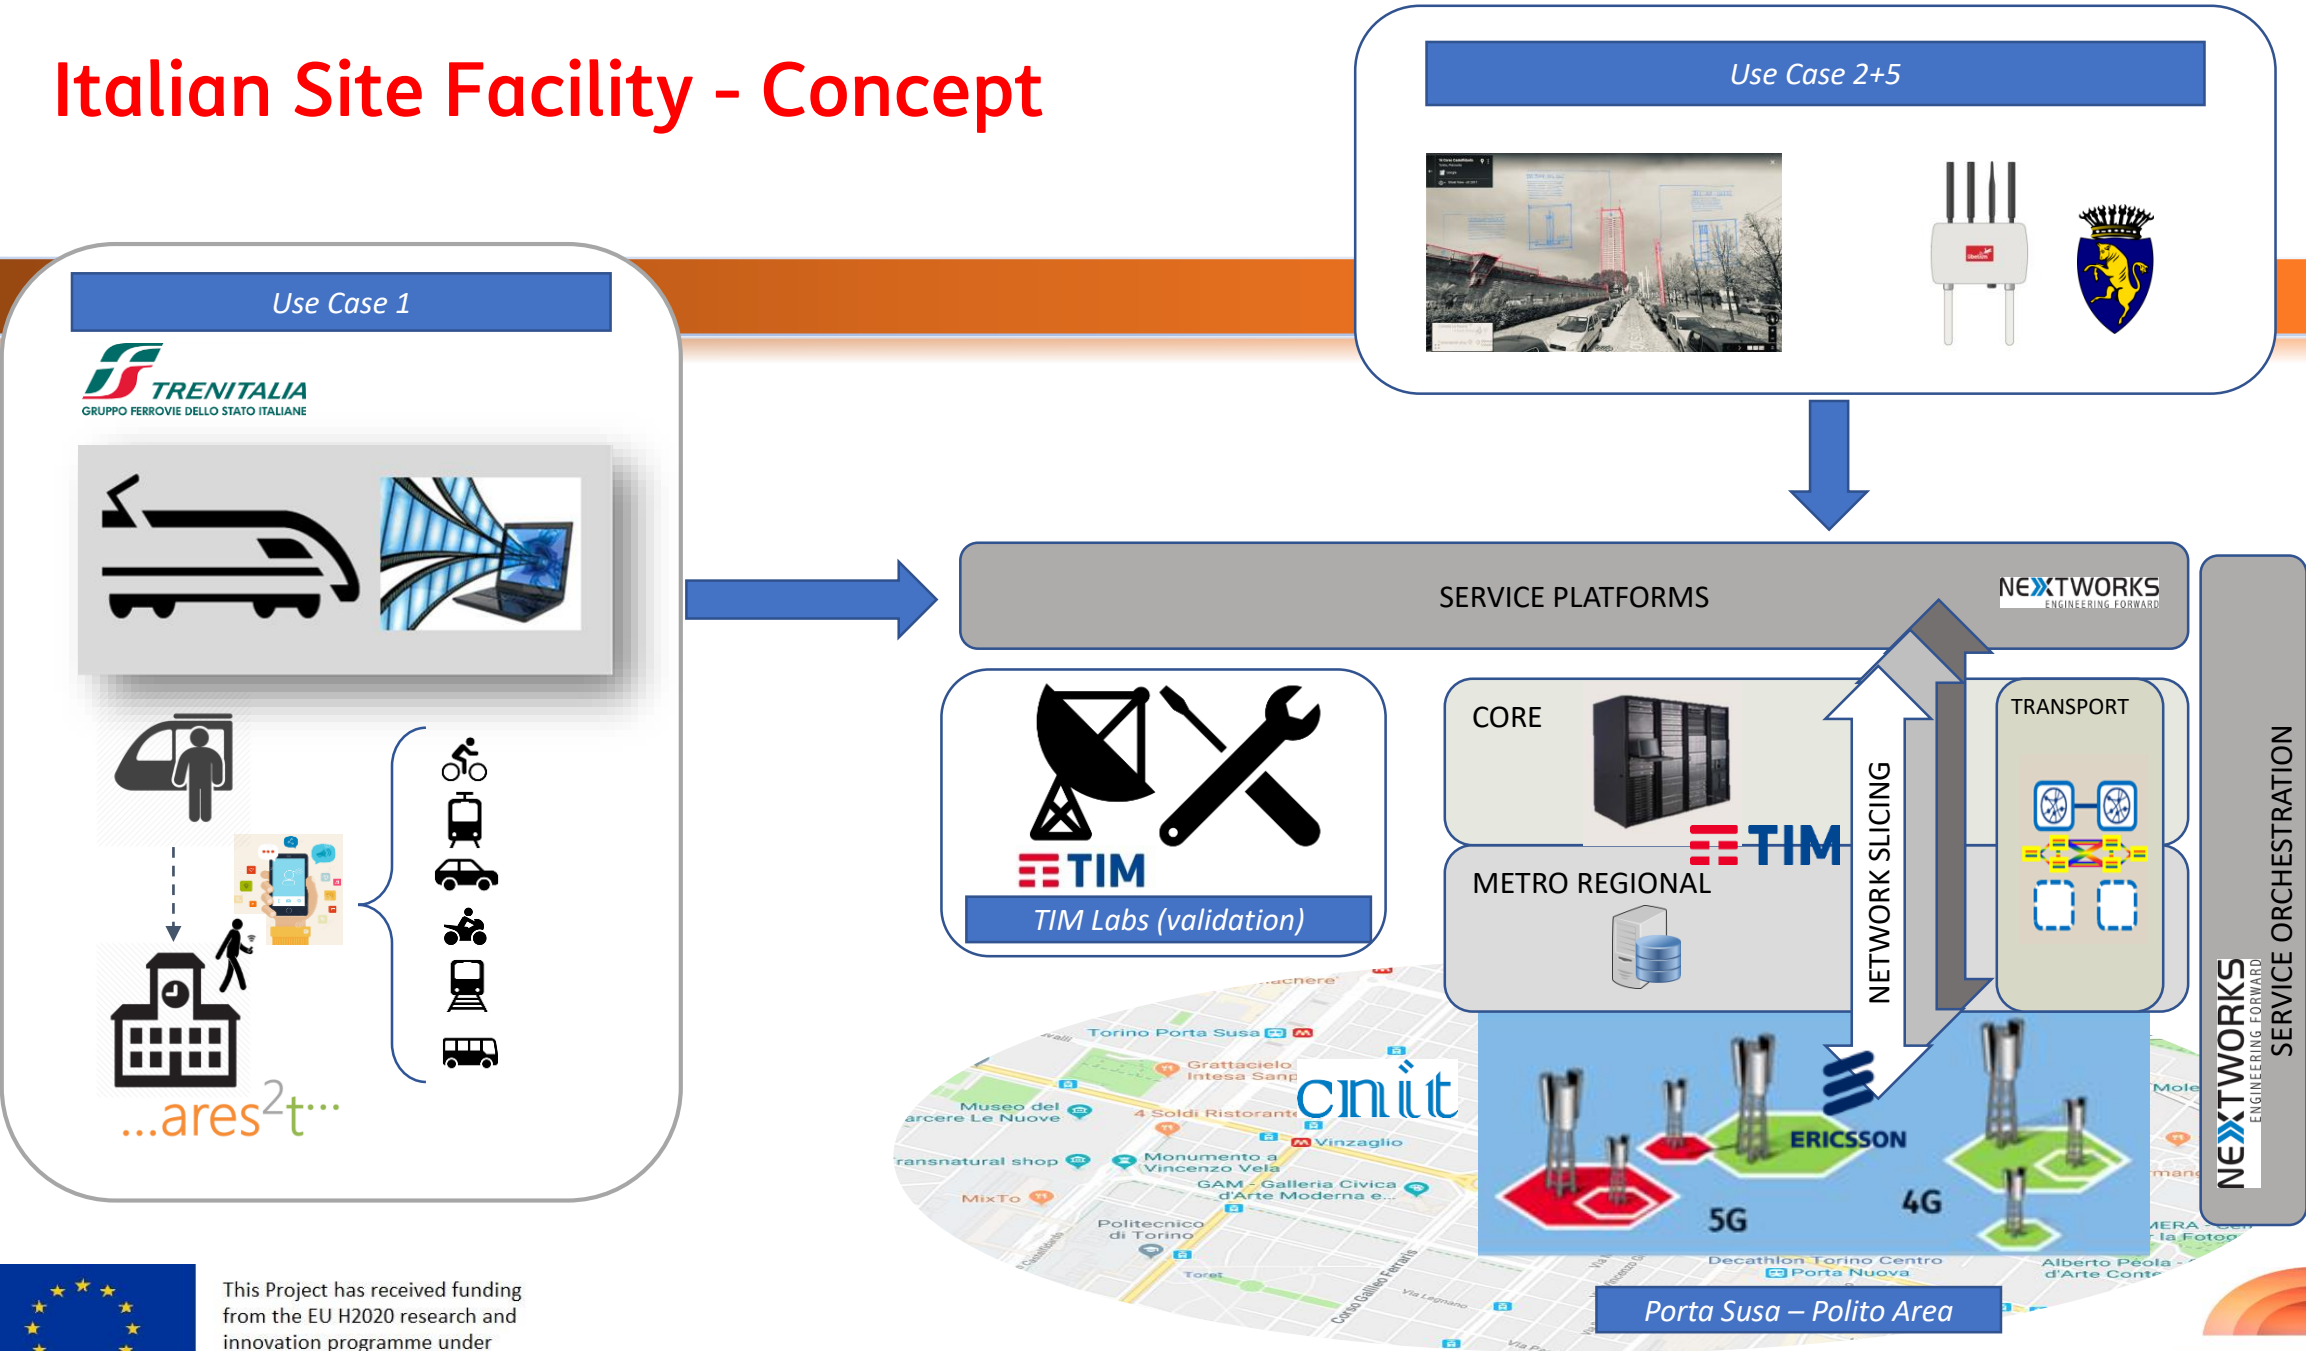

This Project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 815074

5G EVE

Italian Site Facility - Concept

This Project has received funding from the EU H2020 research and innovation programme under Grant Agreement No 815074
